

**EMF Environment and Autism**  
**Tamara Mariea, CCN**  
**July 2006**

Tamara Mariea is a Biochemist and Certified Clinical Nutritionist who works with children affected by autism. She spoke at the Biopro Technology Conference on July 13, 2006, to share what she has learned from treating over 200 children who have autism, and how she is using Biopro Technology in her work with these children.

She began by telling us about the alarming rise in the number of children with autism. She presented the following information: (A chart version of this follows at the end of this paper.)

- ⇒ In the 1970's, 1 in 10,000 children were diagnosed with autism.
- ⇒ In 1984, cell phones were introduced to the market.
- ⇒ In the late 80's the number of cases had risen to 1 in 5,000 children with autism.
- ⇒ In the 90's we saw the proliferation of cell phones, personal computers, and cell towers.
- ⇒ In the late 90's, the number had increased to a startling 1 in 500 children with autism.
- ⇒ By 2004, the number of children diagnosed with autism was 1 in 250
- ⇒ Today, the number of children with autism is 1 in 150!

While the factors contributing to autism are complex, Tamara's work with children has clearly demonstrated to her the part that EMF plays in this illness.

With reference to the staggering increase in the number of autism cases, Tamara pointed out that the introduction of the cell phone in 1984 and the proliferation of EMF since that time have affected mothers, their unborn children, and the children themselves.

Tamara stated that "We are living in a soup we cannot see," and went on to say that "We are procreating damaged children". Her view is that electropollution is harming the fetuses and the children in many ways.

The children she sees in her practice often have the appearance of narcotic dependence on EMF-producing devices. Regular irradiation by EMF creates endorphins, and the child becomes addicted to the very devices that are contributing to the problem.

She said she must eliminate electropollution to facilitate release of heavy metals. A child cannot detoxify because their cells are torqued (the cell membranes are hardened) by electropollution. Once she creates an EMF-neutral environment, the child's system begins releasing the heavy metals. She showed us many before and after EMF stress charts to illustrate this point.

The higher the frequency of the child the more they attract other toxins, so these children become magnets for parasites and other microorganisms. Thus EMF not only causes stress

to the child and slows down detoxification, the child's system when under EMF stress is then further compromised by other damaging and unwanted guests.

Again, Tamara stated how important it is to understand that deep tissue detox requires an electro-neutral environment. She stressed that one must create an EMF neutral environment to heal the child.

She then showed the audience pictures of some of the children she has treated and shared their stories and charts with us. The charts done before the EMF environment was neutralized showed minimal amounts of heavy metals leeching out of the child's body. The charts illustrating tests taken after the child's environment was neutralized often showed massive amounts of metals like mercury, arsenic, and others were being released once the cell membranes were opened up.

The BIOPRO technology Tamara uses includes Cell Chips on cell phones, Universal Chips on all electronic and wireless devices in the child's environment, a Biolife Pendant for the child, the mother, and often the other members of the family, and Home Harmonizers throughout the child's environment. She also adds Vitatonic to the child's nutritional plan.

Here are a few of the children's stories she shared with us:

Andrew - He was so loaded with toxins that after he was detoxified, his head shrunk 1-1/2". Part of Andrew's behavior prior to treatment was that he had to be literally 1inch from the TV most of his waking time.

Mitch - For two years he would not part with his portable DVD player. When he entered Tamara's EMF neutral environment, he went around banging his hand against all the computer screens to try to get his EMF "fix". Within 1 hour of having the Biolife Pendant on his neck, he sat the DVD down. Tamara put Universal Chips on his DVD Player, and the parents added chips and Home Harmonizers to their home environment. Within a few days his behavior changed dramatically, and his system began getting rid of heavy metals and parasites.

Jared - He was 17 months old and had type 1 diabetes. Within 15 minutes of Tamara creating an electro neutral environment, his blood sugar was up 50 points.

Tristan - He was not talking. In addition to Harmonizers and chips, they used 4 pendants for him and his family. Tristan started to talk within a few days, and his Dad is much calmer.

Michael - He was having a histamine increase under duress of EMF and was quite dehydrated. His EMF stress was very high, and he was very allergic from playing computer games. Again, once the EMF environment was under control, he improved rapidly.

Jack - He was very aggressive, kept saying he wanted to kill his sister. Neutralizing the EMF environment and putting pendants on both of them changed this behavior within days.

Gabby - After using harmonizers and the pendant, she finally began detoxing metals.

Noah - They used home harmonizers, chips, pendants. Noah then fed himself for the first time in 2 years. His brain was in permanent chaos from living near a power substation. The family decided to move from that location after they saw the difference the EMF neutral environment made.

Tamara suggested the following information for those interested in learning more:

[A Possible Association Between Fetal/Neonatal Exposure to Radiofrequency Electromagnetic Radiation and the Increased Incidence of Autism Spectrum Disorders](#), Robert C. Kane, Ph.D., February 2004.
